The CloudBlue Boomi Connector is an open-source extension. It is available on the CloudBlue Connect Github repository:

https://github.com/cloudblue/connect-extension-boomi

Deploy the Connector by accessing the repository and downloading the provided files.

Access the AtomSphere platform and then proceed to **Settings**>**Your Account**>**Developer**>**Add Connector**.

Consequently, AtomSphere requires you to provide a descriptor file and archive file. The required descriptor XML file is located at `/scr/main/resources`. You can find the required ZIP archive file within the `/target/` folder.

Once the descriptor and archive files are selected, click **OK** to finalize the extension configuration. As a result, the CloudBlue Boomi Connector will be available to use.
