## About Flowgear

Flowgear is an enterprise-grade platform that enables companies of any size to boost productivity & profitability through pre-built, reusable integrations, and APIs

By using Flowgear's robust platform, you can create enterprise-grade, code-free integrations for your business processes – quickly eliminating the time and cost of developing and maintaining individually hand-coded point-to-point connections.

Developers and integrators can take advantage of our intuitive drag and drop visual designer which encompasses a comprehensive library of pre-built APIs, connectors, and workflow templates. The Flowgear platform is 100% scalable and is backed by a professional support team and robust service level agreements.

## Flowgear Connector

Flowgear's CloudBlue Connect Connector enables vendors and providers to seamlessly integrate their fulfilment processes into their internal or line-of-business systems without coding.

Flowgear integrations are designed visually as Workflows, enabling users to quickly build integration pipelines. Build complex data transformations visually to ensure the fastest possible time to value without obscuring the transformation in script or code.
